Mock Exam 1	**Videos Required:**
	Videos 1 to 20

The answers and working for these questions are shown in **Video 21**

1	Simplify using factorization $$\frac{2p^2 - 18}{2p^2 - 7p + 3}$$
2	Solve the Simultaneous equation using any method $$-4x + 2y = -16$$ $$2x + 3y = 32$$
3	Solve for X $$\frac{3x+4}{5} - \frac{2x-3}{6} = -\frac{3}{4}$$
4	Expand and Simplify $$-\frac{3}{5}x(2x - \frac{1}{2})(\frac{3}{4} - 3x)$$
